AI MITRA • EXPLORE AI TOGETHER

Prompt School

A practical guide to asking AI better questions

For students in Classes 8–10

Learn what prompts are, how to write clear instructions, what to avoid, and how to use 10 ready-to-customise prompt templates for school and everyday creativity.

Remember
A good prompt helps AI understand what you need. But you are still the learner: think, check, practise and make the final work your own.

Understand • Ask • Improve • Create

1. What is a prompt?

A prompt is the question, instruction or message you give an AI tool to tell it what you need. It can be a simple question, or a detailed request with a topic, goal and format. AI uses your prompt as guidance to generate a response. Clear prompts usually make it easier to get answers that match your learning needs. You can improve a prompt by adding details or asking follow-up questions.

Why are prompts useful?

- They help AI understand your goal and the topic you are asking about.
- They let you choose the level of explanation, such as Class 8, 9 or 10.
- They help you request a useful format: steps, examples, a table, a summary or practice questions.
- They make learning interactive: you can ask for hints, feedback and one question at a time.

2. How to create your own prompt

Use this simple structure. You do not need every part for every request—choose the details that matter.

Part	What to include	Example
Role	Who should the AI act as?	“Act as my science tutor.”
Task	What do you want it to do?	“Explain photosynthesis.”
Context / level	Your class, subject or starting level.	“I am in Class 8.”
Instructions	What should it include or avoid?	“Use simple words and one daily-life example.”
Format	How should the answer look?	“Use headings and five key points.”
Check	How should it help you practise?	“Ask me three questions at the end.”

Easy memory trick: R-T-C-I-F

Role → Task → Context → Instructions → Format. Add a way to check your learning when useful. The order can change; the important thing is to make your request clear.

3. Rules for better prompts

1. Be specific. Name the subject and exact topic instead of saying “teach me everything.”
2. Mention your class level. Ask for an explanation suitable for Class 8, 9 or 10.
3. Explain your goal. Say whether you want to understand, revise, research, practise or create.
4. Ask for simple language. Request short sentences, familiar examples and definitions of difficult words.
5. Choose the answer format. Ask for steps, a table, a short summary, a checklist or a storyboard.
6. Set useful limits. For example: “Use five points” or “Keep it under 150 words.”
7. Improve through follow-ups. If an answer is confusing, say exactly what you want explained again.
8. Check the answer. Compare important facts with your textbook, teacher or reliable sources.

4. Prompting don'ts: what to avoid

- Don't ask vague questions such as “Tell me about science.” Give a topic and a goal.
- Don't blindly trust every answer. AI can make mistakes, leave out details or invent facts and sources.
- Don't copy AI answers and submit them as your own. Use them to learn, then write in your own words.
- Don't share private information: passwords, OTPs, phone numbers, home addresses, school IDs or private photos.
- Don't upload classmates' photos, voices or personal work without their permission.
- Don't use AI to bully, cheat, create fake images of people or spread misinformation.
- Don't ask AI to do every step. Try first, then ask for a hint or an explanation of the part you find difficult.
- Don't ignore age limits, parental-consent rules or your school's instructions for using AI.

Safe habit: If you would not share a detail publicly with strangers, do not put it into an AI chat. When unsure, ask a parent or teacher before uploading or sharing anything.

5. A good study prompt: worked example

Imagine you are learning photosynthesis. A weak prompt gives the AI very little direction. A structured prompt explains what you need.

Weak prompt

“Explain photosynthesis.”

This does not tell the AI your class level, how simple the explanation should be, or how you want to practise.

Improved prompt

Act as my friendly science tutor. I am a Class 8 student and I am learning photosynthesis. Explain what it is and why plants need it using simple English and short sentences. Explain the words sunlight, chlorophyll, carbon dioxide and glucose. Give one example from everyday life and describe the process in five clear steps. At the end, ask me three questions one at a time. Wait for my answer before giving the next question. If I make a mistake, give me a hint and explain the correct idea. Do not just give me answers to memorise.

Why is it better? It gives a role, a clear task, class-level context, language instructions, specific content, an example, a step-by-step format and an interactive way to check understanding.

How to personalise it

Replace the topic with your lesson. Change Class 8 to your class. Add the exact textbook chapter or notes if your teacher allows it. If you want a shorter answer, specify a word limit. If you want to practise, ask for questions one at a time.

6. Ten prompt templates for students

Copy a template, replace the words inside [square brackets], and add details about your task. You can use these with an AI assistant, but check the tool's age rules and your school's instructions.

1. Understand a difficult lesson

For learning a new concept

Act as my friendly [subject] tutor. I am in Class [8/9/10] and I am learning [topic]. Explain it in simple English using short sentences. Start with the basic idea, define difficult words, and give [two] everyday examples. Break the explanation into small steps. Finish with five key points and ask me three questions one at a time. Wait for my answer before continuing.

2. Learn from my textbook or class notes

For source-based study

Act as my study assistant. I am in Class [8/9/10]. Use only the text or notes I provide about [chapter/topic]. Make a clear summary with headings, important definitions and key facts. Do not add facts that are not in my material. If something is unclear or missing, tell me. Mention which heading or part of my notes supports each important point.

3. Make a revision plan

For exam preparation

Act as my study planner. I am in Class [8/9/10] and I need to revise [subject/topics] before [exam/date]. I can study for [minutes/hours] each day. Create a realistic day-by-day plan with short study sessions, breaks and revision time. Give priority to topics I find difficult: [topics]. Include a small self-test at the end of each day. Keep the plan manageable.

4. Practise questions and get feedback

For active recall

Act as my [subject] practice coach for Class [8/9/10]. Test me on [topic] with [number] questions at [easy/medium/challenging] level. Ask only one question at a time and wait for my answer. After I answer, tell me what I got right, explain any mistake kindly and give a hint before revealing the answer. At the end, summarise what I should revise.

5. Understand a maths problem step by step

For maths learning

Act as my patient maths tutor. I am in Class [8/9/10]. Help me understand this problem: [paste problem]. Do not jump straight to the final answer. First identify the concept or formula needed, then guide me through one step at a time. Explain why each step is used. Ask me to try the next step before showing it. At the end, give me one similar practice problem.

6. Research a school project

For responsible research

Act as my school project research guide. I am in Class [8/9/10] and my topic is [topic]. Help me understand the topic and create a project outline with an introduction, [three] main sections and a conclusion. Suggest reliable sources such as educational institutions, government websites, museums or scientific organisations. Provide working source links where possible. Separate confirmed facts from ideas to investigate, and do not invent statistics or references. Use simple language.

7. Improve my writing

For essays, paragraphs and reports

Act as my writing coach. I am in Class [8/9/10]. I wrote this [essay/paragraph/report] about [topic]: [paste my draft]. Help me improve grammar, spelling, clarity and organisation while keeping my ideas and my own voice. First point out up to five improvements and explain why they help. Then show an edited version. Do not add made-up facts or make it sound like an adult wrote it.

8. Create a poster or presentation plan

For visual communication

Act as my school presentation and design helper. I am in Class [8/9/10] and I need to create a [poster/infographic/presentation] about [topic] for [audience]. Suggest a clear title, a short message, [number] key facts and a simple layout. Recommend what diagrams, icons or images would help explain the topic. Keep text short and readable. Tell me which facts I should verify and suggest sources. Do not create fake statistics.

9. Create a story, poem or video idea

For creativity and content creation

Act as my creative writing and video-planning partner. I want to make a [short story/poem/educational video/comic] about [topic or theme] for [audience]. The style should be [funny/inspiring/mysterious/simple]. Give me [three] original ideas, then help me develop the one I choose into a [story outline/script/storyboard]. Use age-appropriate language. Avoid copying existing characters, songs or creators' work. Leave space for me to add my own ideas.

10. Explore an idea or build a small project

For curiosity and making

Act as my beginner-friendly project mentor. I am in Class [8/9/10] and I want to explore [idea/problem]. Suggest a simple, safe project I can make using [materials/tools I have]. Explain the goal, materials, steps, what I should observe and how to present the result. Keep it suitable for my age and skill level. Do not suggest dangerous experiments or collecting other people's private data. Ask me what materials I have before giving a detailed plan.

7. Your prompt-writing checklist

Before you press send, check these points:

- ☐ Have I said exactly what I want the AI to do?
- ☐ Have I mentioned my class level and topic?
- ☐ Have I explained the kind of answer that will help me?
- ☐ Have I asked for examples, steps or a format if needed?
- ☐ Have I avoided sharing private or identifying information?
- ☐ Will I check the answer and do my own thinking?

A final reminder from AI Mitra

Good prompting is a skill you build with practice.
Start with a clear question. Add useful details. Read the answer carefully. Ask a better follow-up if needed.
Then use what you learned in your own work.

AI MITRA • EXPLORE AI TOGETHER

Stay curious. Ask clearly. Think for yourself.

This guide is an educational resource for students in Classes 8–10. Always follow the age requirements, privacy rules and school policies of the AI tools you use.
